

It's time to rethink the Akaroa Wastewater scheme

Council's proposal will waste Christchurch ratepayer money because

- leaking pipes in Akaroa mean wastewater is over **60% stormwater and groundwater infiltration**
- the proposed system is **three times bigger** than it could be
- precious Akaroa water will be treated and pumped away for disposal elsewhere at the cost of approximately **\$45- \$76 million**
- the proposed system will impact neighbouring communities and put the **environment at risk**

YOUR VOICE IS VITAL
make your submission to the Council to...

- fix the pipes first
- recycle the water to Akaroa - where it's needed the most
- say **NO** to the irrigation options, and rethink the project to save water.
